FOR IMMEDIATE RELEASE

SSC Demonstrates Enhanced Expertise in Life Cycle Assessment

Royersford, PA – Sustainable Solutions Corporation (SSC) is proud to announce the addition of a second Life Cycle Assessment Certified Professional (LCACP) to our Team and industry recognition as a premier LCA practitioner. With an increased focus on product transparency, many organizations are conducting LCAs and EPDs to calculate and disclose the environmental impacts of their products. The comprehensive perspective of a product that an LCA provides can be used to identify sources of environmental impacts as well as opportunities for product improvement and cost savings.

SSC is dedicated to providing the highest quality LCA services to our clients, and has the expert staff to meet that commitment. By passing her examination from the American Center for Life Cycle Assessment (ACLCA), Cara Watson, Sustainability Specialist, demonstrates a mastery of LCA principles and joins an elite group of only 85 LCA professionals certified through the ACLCA. Cara joins Jim Mellentine, Corporate Sustainability Manager at SSC and fellow LCACP, in delivering superior service and ensuring quality and accuracy in every project.

Completing dozens of LCAs across a wide range of industries, SSC is acknowledged as a leading LCA provider. SSC was recently added to [BuildingGreen's list of LCA Practitioners](#) as part of the 2030 Challenge for Products. This specific program is using life cycle impact data to quantify, and ultimately reduce, carbon emissions in building products. Utilizing established and newly developed Product Category Rules (PCRs), LCA information is being disclosed in Environmental Product Declarations (EPDs), which concisely presents product impacts in a comparable fashion. Recognizing SSC's significant experience in PCR development and EPD publication, BuildingGreen added us to their short-list of qualified LCA practitioners.

Companies that publish LCA data instill consumer confidence, meet sustainable supply chain requirements, increase efficiency, and can gain market share. As transparency continues to offer a competitive advantage, first-movers benefit by leading the market. "SSC is proud to offer world-class Life Cycle Assessment services that help our clients advance their businesses through Corporate Sustainability," says Tad Radzinski, President of SSC.
